### ANALYSIS OF THE TIME SERIES BY THE BOX-JENKINS METHOD

Statistical analysis using R language

## I. Input file

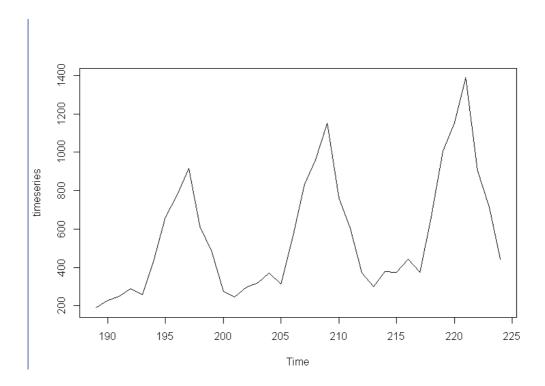

data<- scan("C:/Documents/cola.dat") - reading data from file

## Read 36 items

- > timeseries<-ts(data,frequency=1,start=c(189))
- > timeseries

```
> timeseries<-ts(data,frequency=1,start=c(189))</p>
  timeseries
Time Series:
Start = 189
End = 224
Frequency = 1
[1] 189 229 249 289 260 431 660 777 915 613
                                                    485
                                                                   296
[16] 370 313 556 831 960 1152 759 607 371 298
                                                    378
                                                         373
                                                                  374
                                                                       660
                                                              443
[31] 1004 1153 1388 904 715 441
```

# >plot.ts(timeseries)

Picture 1. Time series plot

Series has ascending and seasonal effect. The trend is a 1st order polynomial.

## Forming a new time series

Discard the last 12 members of the series and build the model ARIMA.

>dataNew<- scan("C:/Documents/cola n.dat")

### Read 24 items

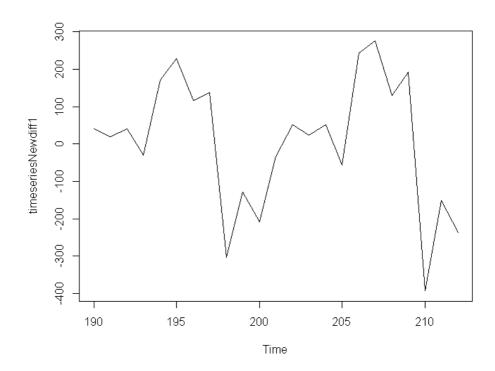

- > timeseriesNew<-ts(dataNew,frequency=1,start=c(189))
- > timeseriesNew

```
timeseriesNew<-ts(dataNew,frequency=1,start=c(189))
> timeseriesNew
Time Series:
Start = 189
End = 212
Frequency = 1
     189
          229
               249
                     289
                          260
                               431
                                     660
                                               915
     370
          313
               556
                     831
                          960 1152
                                     759
                                          607
```

# II. Applying difference of the order of d=1

> timeseriesNewdiff1<-diff(timeseriesNew,differences=1)

>plot.ts(timeseriesNewdiff1)

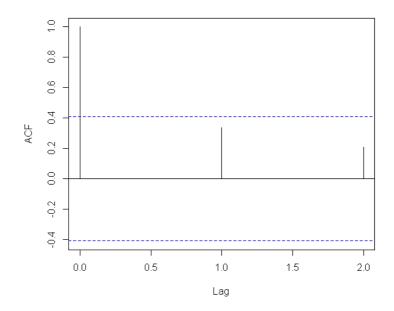

Picture. 2. Plot after applying the difference

### **Autocorrelation function**

>acf(timeseriesNewdiff1, lag.max=2)

>acf(timeseriesNewdiff1, lag.max=2,plot=FALSE)

#### Series timeseriesNewdiff1

Picture 3. Autocorrelation function

```
> acf(timeseriesNewdiff1, lag.max=2)
> acf(timeseriesNewdiff1, lag.max=2,plot=FALSE)
Autocorrelations of series 'timeseriesNewdiff1', by lag

0 1 2
1.000 0.337 0.209
> |
```

## Partial autocorrelation function

>pacf(timeseriesNewdiff1, lag.max=12)

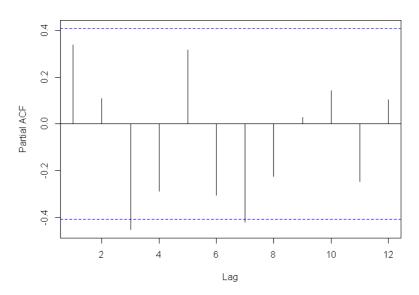

>pacf(timeseriesNewdiff1, lag.max=12, plot=FALSE)

```
> pacf(timeseriesNewdiff1, lag.max=12)
> pacf(timeseriesNewdiff1, lag.max=12, plot=FALSE)

Partial autocorrelations of series 'timeseriesNewdiff1', by lag

1 2 3 4 5 6 7 8 9 10 11
0.337 0.107 -0.453 -0.287 0.316 -0.305 -0.420 -0.223 0.028 0.144 -0.247
12
0.104
> |
```

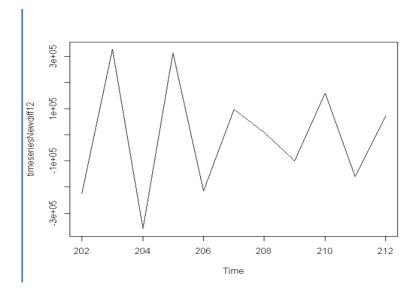

#### Series timeseriesNewdiff1

Picture 4. Partial autocorrelation function

# III. Applying difference of the order of d=12

- > timeseriesNewdiff12<-diff(timeseriesNewdiff1,differences=12)
- > plot.ts(timeseriesNewdiff12)

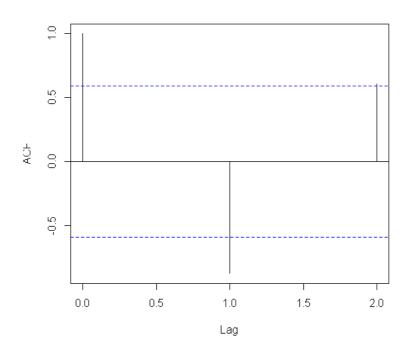

Picture 5. Plot after applying the difference

### **Autocorrelation function**

>acf(timeseriesNewdiff12, lag.max=2)

>acf(timeseriesNewdiff12, lag.max=2, plot=FALSE)

#### Series timeseriesNewdiff12

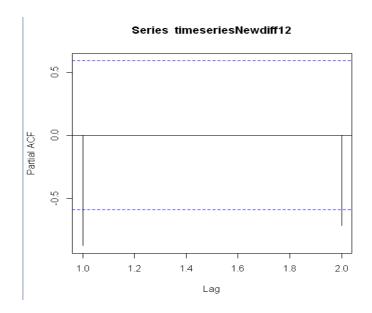

Picture 6. Autocorrelation function

## Partial autocorrelation function

>pacf(timeseriesNewdiff12, lag.max=2) -строим график

>pacf(timeseriesNewdiff12, lag.max=2, plot=FALSE) - получаем значения ЧАФ

Picture 7. Partial autocorrelation function

Let's predict previously discarded 12 series members using ARIMA.

>library("forecast")

>timeseriesNewArima<-arima(timeseriesNew,order=c(0,1,1))

```
> timeseriesNewArima<-arima(timeseriesNew,order=c(0,1,1))
> timeseriesNewArima

Call:
    arima(x = timeseriesNew, order = c(0, 1, 1))

Coefficients:
        ma1
        0.2393
s.e. 0.1624

sigma^2 estimated as 27897: log likelihood = -150.38, aic = 304.76
> |
```

>timeseriesNewforecasts<-forecast.Arima(timeseriesNewArima,h=12)

>timeseriesNewforecasts

A forecast of 12 measures forward was made. I got values that are close to the actual values

### **Conclusion**

The time series is predictable if you look at the graphs, since there are significant values that exceed critical ones - control boundaries.
